

Aluminium - the best packaging material to recycle!

Why is recycling vital?

- 95% less energy required
- 90% less CO2 emissions

compared to initial creation

Avoids mining new material since aluminium can be recycled endlessly

Industry creating employment through collection, separation and reprocessing of recyclables

Decrease waste to SA's landfills, which are already close to capacity

98 million kg of dumped annually

R 825 bn worth is discarded onto landfills yearly, help to reduce this amount

HOW to recycle?

- **Sign up** with a recycling collection company such as Whole Earth Recycling www.wholeearth.co.za. They will collect your recyclable material from your home, complex, office or school within Johannesburg for a small monthly fee. No sorting is required – Whole Earth Recycling supports a community project consisting of 24 sorters that sort and sell the recyclable material in order to generate an income for themselves.

- **Drop off** your Aluminium containers at your local recycling drop off site, which can be found on COLLECT-A-CAN (www.collectacan.co.za) who will pay you x,xx Rand per kg

- **Separate** your Aluminium containers and other recyclables at least in order to improve the process of services like PIKITUP (www.pikitup.co.za)

Play your part in recycling and start today!

WHAT is recyclable?

WYDA containers and household foil are made out of 100% aluminium. Aluminium can be recycled indefinitely without losing its properties.

Tipp: Scrape food residue from the container or foil to optimise the recycling process.

Find out what other materials are recyclable for your take away packaging on the Whole Earth Recycling website www.wholeearth.co.za
